at the cost of a local call.

Customers using BP Service Stations

1. Guarantee

BP guarantees that its fuels are clean, and assuming all the criteria below are met, will not cause fuel system problems. For service station customers only, the terms of the guarantee are defined below:

2. BP Products covered

BP's fuel guarantee applies to all BP branded motor spirits (unleaded, e10, opal unleaded, Premium Unleaded, BP Ultimate, solvents), diesel and LPG purchased from BP branded service stations painted in BP's colours and where BP's marks (shield, helios) are prominently displayed.

Restrictions: The BP guarantee only applies to BP sites as defined above. Further, BP's fuel guarantee does not apply if the retail service station is selling non-BP products, under the WA Petroleum Retailers Rights and Liabilities Act 1982 (50/50 laws), or in any other circumstances. Finally, this fuel guarantee does not apply to lubricants, which have a separate guarantee.

3. Conditions to be met before claims are processed

- (i) Suitable for Purpose
The fuel must be recommended by the manufacturer for use in your vehicle and have been in your fuel tank for less than three months.
- (ii) Vehicle / Equipment Maintenance
Your vehicle must be well maintained. BP fuels guarantee does not cover parts that are subject to wear or age and would be regarded as items requiring attention during normal maintenance.
- (iii) Proof of Purchase
You must be able to prove that the fuel in question was purchased from a BP branded service station.

(iv) Timing

A claim must be made within a reasonable time of the purchase of the fuel and at the first reasonable opportunity after a fault is believed to have occurred. A sample of fuel must be retained from your vehicle to allow a claim to be processed.

What is a reasonable time for claims is determined by BP at its discretion, but will not be more than six months.

(v) Confirmation Process for any Fault

If required by BP, a sample from the fuel in your tank must be tested and the results of the tests must show the same problem as the problem shown to be in the fuel in the service station.

(vi) Service Station/Distributor Fault

The fault in the fuel may not be a manufacturing fault – it may have been caused by the service station operator or the distributor. In these circumstances, BP will claim the cost back from the operator or distributor and will want you to transfer over to BP your rights against the operator.

4. What BP will pay:

If the results of BP's investigations show that the BP fuel you have purchased has caused a problem with a component of your fuel system, BP will:

- (i) replace the product free of charge; and
- (ii) pay to have the affected parts replaced.

BP may, at its discretion and depending on the circumstances, reimburse other costs that you have incurred.

5. Other Contracts

If you have a written agreement with BP or your distributor, which includes terms that deal with fuel quality, that agreement will take precedence over this guarantee and this guarantee will not apply.
