

Energy Security and Supply

Completion of the Whiting Refinery Modernization project will afford greater energy security here in the Midwest, as conventional lighter crude oil supplies from the U.S. Southwest diminish, and are replaced by heavier feedstock.

The modernization will bring Midwest drivers up to an additional 1.7 million gallons of gasoline and diesel fuel per day, helping to ensure that there is enough fuel for our cars and trucks, and importantly, that Hoosier businesses have the fuel that they need to operate and grow.

Given the long-term demand for oil, Hoosiers need a plentiful and secure supply of Whiting Refinery products to maintain and increase their standard of living, while building a prosperous future for future generations.
