

“You can’t go from a highly dependent fuel economy one day to no oil. There has to be a transition.”

▲ Chris Pierce and Aerie Treska/Teachers

Natural gas is the clean bridge to renewable energy.

By shifting the balance of the energy mix to natural gas, the cleanest burning fossil fuel, the U.S. could reduce emissions of carbon dioxide in new power generation by up to 53%. Today natural gas makes up more than half of BP’s energy production.

It’s a start.
