\*More than 500 years.

♦Less than 0.05%.

**Notes:**

**Proved reserves of coal** – Generally taken to be those quantities that geological and engineering information indicates with reasonable certainty can be recovered in the future from known deposits under existing economic and operating conditions.

**Reserves/Production (R/P) ratio** – If the reserves remaining at the end of the year are divided by the production in that year, the result is the length of time that those remaining reserves would last if production were to continue at that level.

**Source of reserves data** – World Energy Council.

\*Source of Marker Price: McCloskey Coal Information Service.

**Note:** cif = cost+insurance+freight (average prices).

**Proved reserves at end 2002**

Thousand million tonnes (share of anthracite and bituminous coal is shown in brackets)

**Production**

Million tonnes oil equivalent

**Consumption**

Million tonnes oil equivalent

Global coal production and consumption have grown by less than 1% per annum over the last decade as gains in Asia Pacific and North America have been partially offset by declines in Europe & Eurasia.
