*More than 100 years.

†Less than 0.05.

♦Less than 0.05%.

• Remaining established reserves, less reserves 'under active development'.

‡Excludes Former Soviet Union.

n/a not available.

Notes: Proved reserves of oil – Generally taken to be those quantities that geological and engineering information indicates with reasonable certainty can be recovered in the future from known reservoirs under existing economic and operating conditions.

Reserves-to-production (R/P) ratio – If the reserves remaining at the end of any year are divided by the production in that year, the result is the length of time that those remaining reserves would last if production were to continue at that rate.

Source of data – The estimates in this table have been compiled using a combination of primary official sources, third-party data from the OPEC Secretariat, *World Oil, Oil & Gas Journal* and an independent estimate of Russian reserves based on information in the public domain. Canadian proved reserves include an official estimate of 10.2 billion barrels for oil sands 'under active development'. Reserves include gas condensate and natural gas liquids (NGLs) as well as crude oil.

Annual changes and shares of total are calculated using thousand million barrels figures.

Proved reserves at end 2006

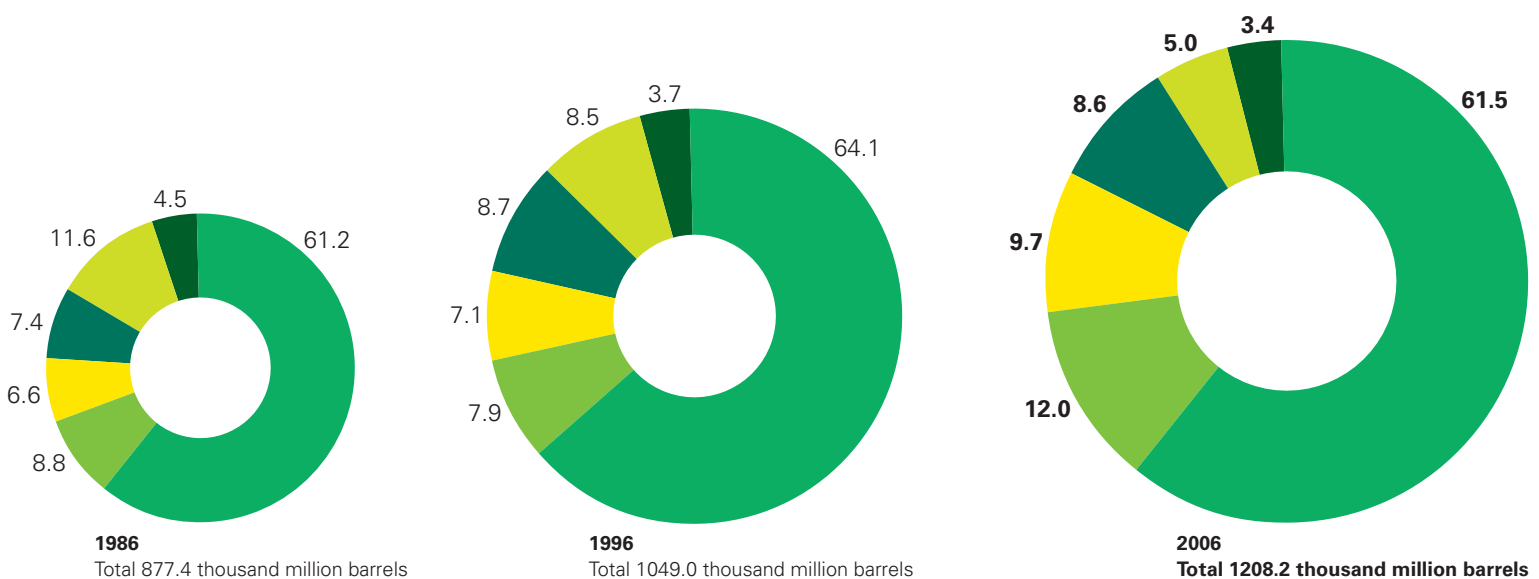

Thousand million barrels

Distribution of proved reserves in 1986, 1996 and 2006

*Includes crude oil, shale oil, oil sands and NGLs (the liquid content of natural gas where this is recovered separately). Excludes liquid fuels from other sources such as biomass and coal derivatives.

‡Excludes Former Soviet Union.

♦Less than 0.05%.

Production by area

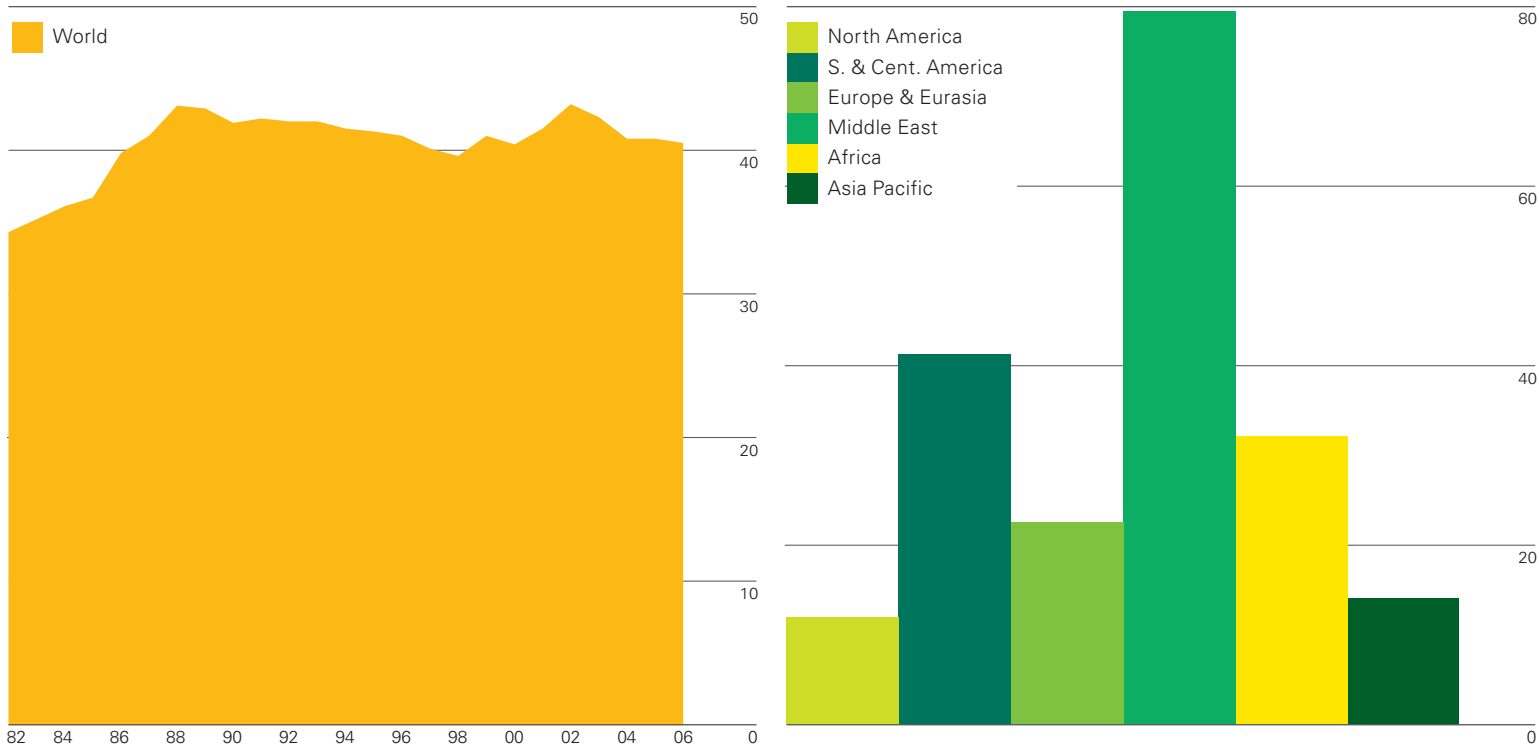

Million barrels daily

World oil production rose by 400,000b/d in 2006. Former Soviet Union output rose by 450,000b/d, driven by Russia and Azerbaijan. OECD production fell by 430,000b/d, with declines in Norway, the UK and Mexico offsetting growth in Canada. Other non-OPEC production increased due to rising Angolan output. OPEC output edged up by 130,000b/d.

Reserves-to-production (R/P) ratios

Years

The world's oil R/P ratio edged lower in 2006, reaching 40.5 years, compared with 41 years in 1996 and 39.8 years in 1986. The level of reserves fell by 1 billion barrels, or 0.1%. Declines in Norway and Mexico were partially offset by increases in Russia and Brazil.

*Inland demand plus international aviation and marine bunkers and refinery fuel and loss. Consumption of fuel ethanol and biodiesel is also included.

♦Less than 0.05%.

Notes: Annual changes and shares of total are calculated using million tonnes per annum figures.

Differences between these world consumption figures and world production statistics on page 8 are accounted for by stock changes; consumption of non-petroleum additives and substitute fuels; and unavoidable disparities in the definition, measurement or conversion of oil supply and demand data.

Consumption by area

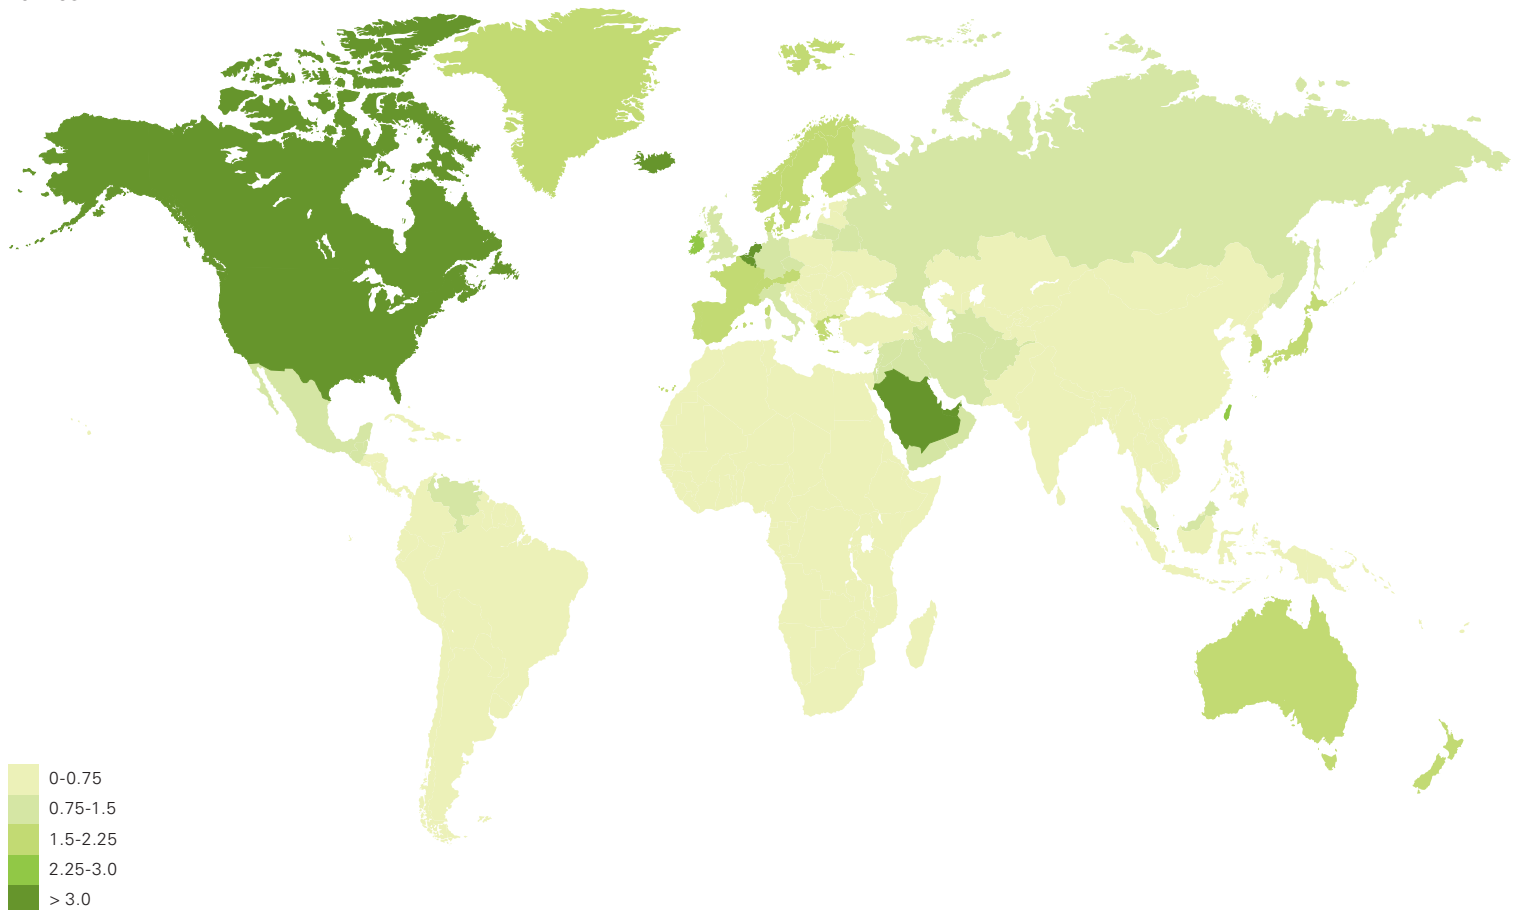

Million barrels daily

World oil consumption rose by just under 650,000b/d in 2006, about half the 10-year average. OECD consumption fell by 400,000b/d, the biggest decline since 1983. Oil consumption growth was above average in China and oil-exporting countries.

‡Excludes Former Soviet Union.

*Less than 0.05%.

Notes: Annual changes and shares of total are calculated using thousand barrels daily figures.

'Light distillates' consists of aviation and motor gasolines and light distillate feedstock. 'Middle distillates' consists of jet and heating kerosenes, and gas and diesel oils (including marine bunkers). 'Fuel oil' includes marine bunkers and crude oil used directly as fuel. 'Others' consists of refinery gas, liquified petroleum gas (LPG), solvents, petroleum coke, lubricants, bitumen, wax, other refined products and refinery fuel and loss.

Product consumption by region

Million barrels daily

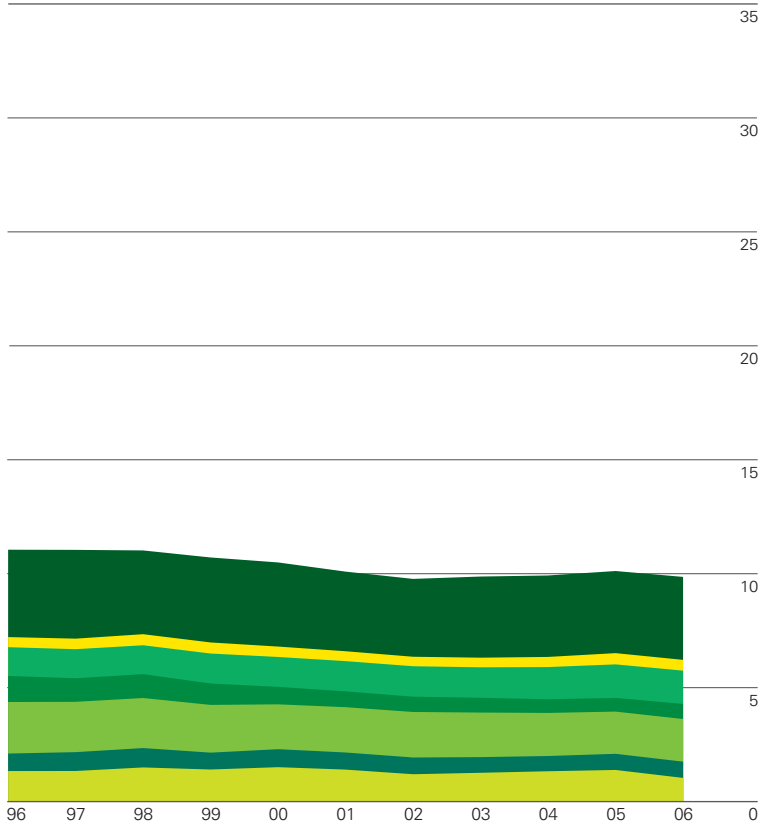

Light distillates

Middle distillates

Fuel oil

Others

Consumption growth in 2006 was below average for all product groupings. Consumption of middle distillates grew most rapidly. Fuel oil consumption declined due to a 25% drop in North American consumption.

Refinery utilization

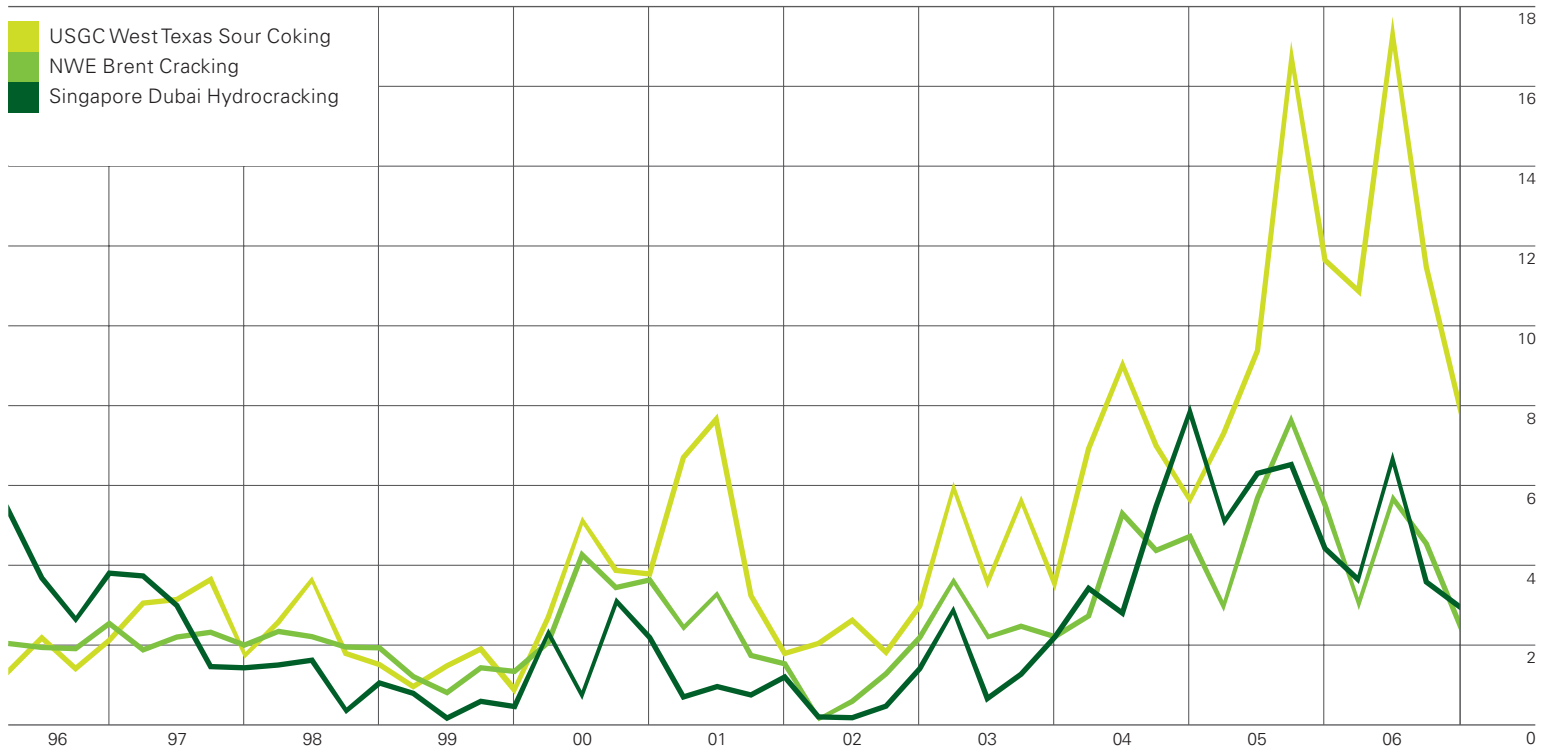

Percentage

Demand growth slowed again in 2006 and was exceeded by global refining capacity additions for the first time since 2001. As a result, global average refinery utilization fell to 85.8% versus a revised 86.6% for 2005. Even so, crude runs grew rapidly in Asia Pacific, the Middle East and the Former Soviet Union in support of strong domestic demand. In every other region, throughputs fell versus 2005 levels.

Regional refining margins

US dollars per barrel

Note: The refining margins presented are benchmark margins for three major global refining centres: US Gulf Coast (USGC), North West Europe (NWE – Rotterdam) and Singapore. In each case, they are based on a single crude oil appropriate for that region and have optimized product yields based on a generic refinery configuration (cracking, hydrocracking or coking), again appropriate for that region. The margins are on a semi-variable basis, i.e. the margin after all variable costs and fixed energy costs.
