n/a not available.

**Notes: Proved reserves of natural gas** – Generally taken to be those quantities that geological and engineering information indicates with reasonable certainty can be recovered in the future from known reservoirs under existing economic and operating conditions.

**Reserves-to-production (R/P) ratio** – If the reserves remaining at the end of any year are divided by the production in that year, the result is the length of time that those remaining reserves would last if production were to continue at that rate.

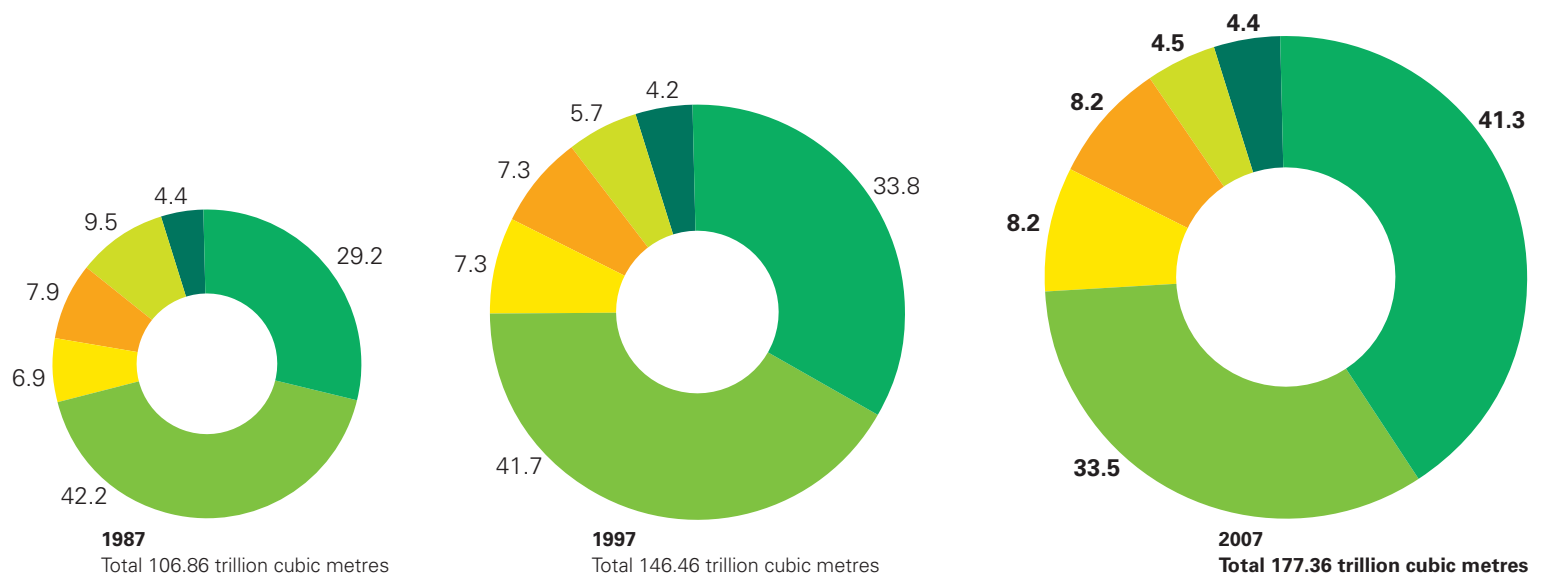

**Source of data** – The estimates in this table have been compiled using a combination of primary official sources and third-party data from Cedigaz.

**Proved reserves at end 2007**  
Trillion cubic metres

**Distribution of proved reserves in 1987, 1997 and 2007**  
Percentage

- Middle East
- Europe & Eurasia
- Africa
- Asia Pacific

\*Excluding gas flared or recycled.

**Notes:** As far as possible, the data above represents standard cubic metres (measured at 15°C and 1013mbar); because it is derived directly from tonnes of oil equivalent using an average conversion factor, it does not necessarily equate with gas volumes expressed in specific national terms.**Annual changes and shares of total are calculated using million tonnes of oil equivalent figures.**Natural gas production data expressed in billion cubic feet per day is available at [www.bp.com/statisticalreview](http://www.bp.com/statisticalreview).

## Production by region

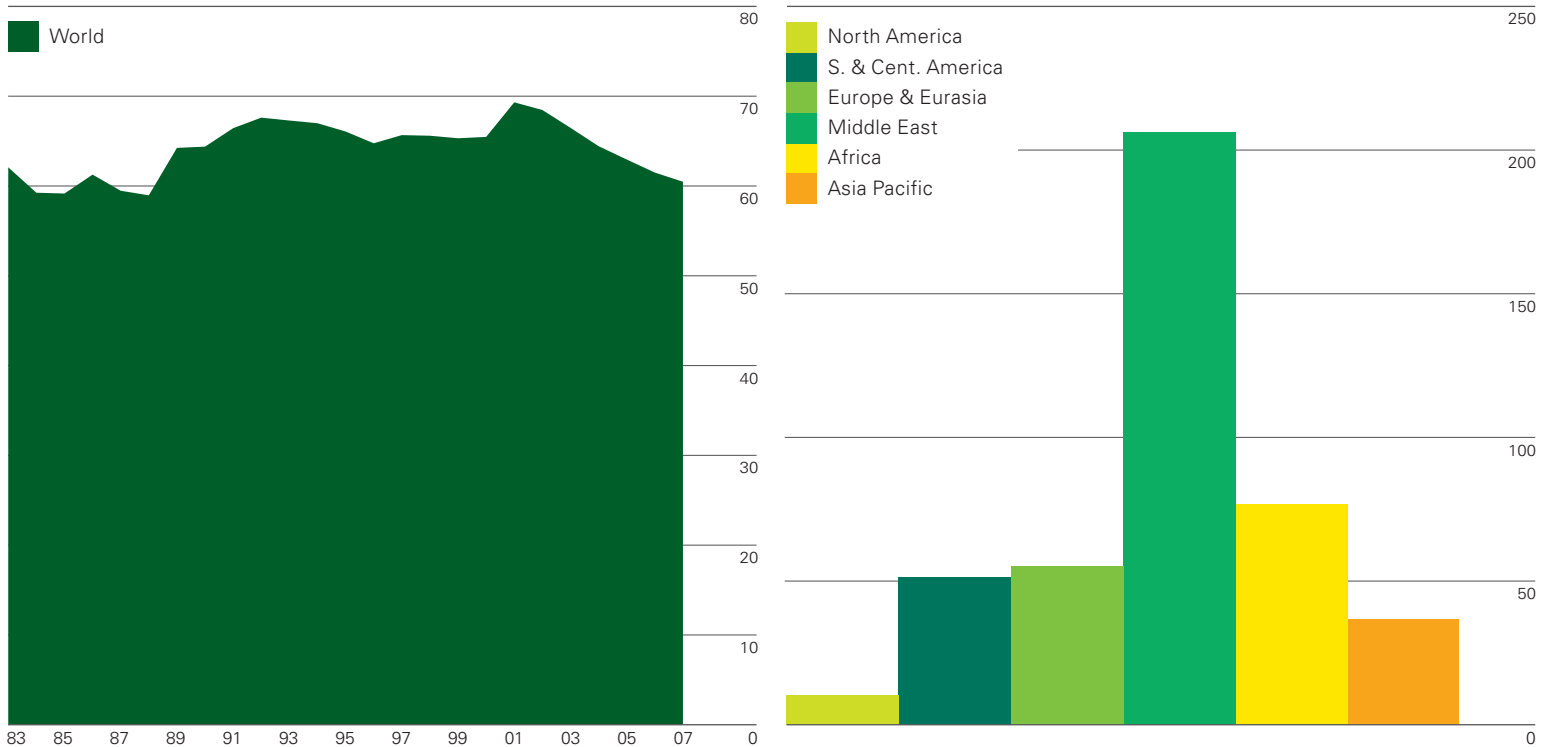

Billion cubic metres

World natural gas production grew by 2.4% in 2007, slightly below the 10-year average. North American production was very strong, especially in the US (+4.3%, the strongest since 1984). All other regions except Asia saw below-average growth. EU output declined by 6.4%.

## Reserves-to-production (R/P) ratios

Years

The world's natural gas R/P ratio declined to 60.3 years in 2007, even though reserves increased by more than 1 trillion cubic metres. Increases in Indonesia, Iran and China accounted for most of the growth.

## Consumption by region

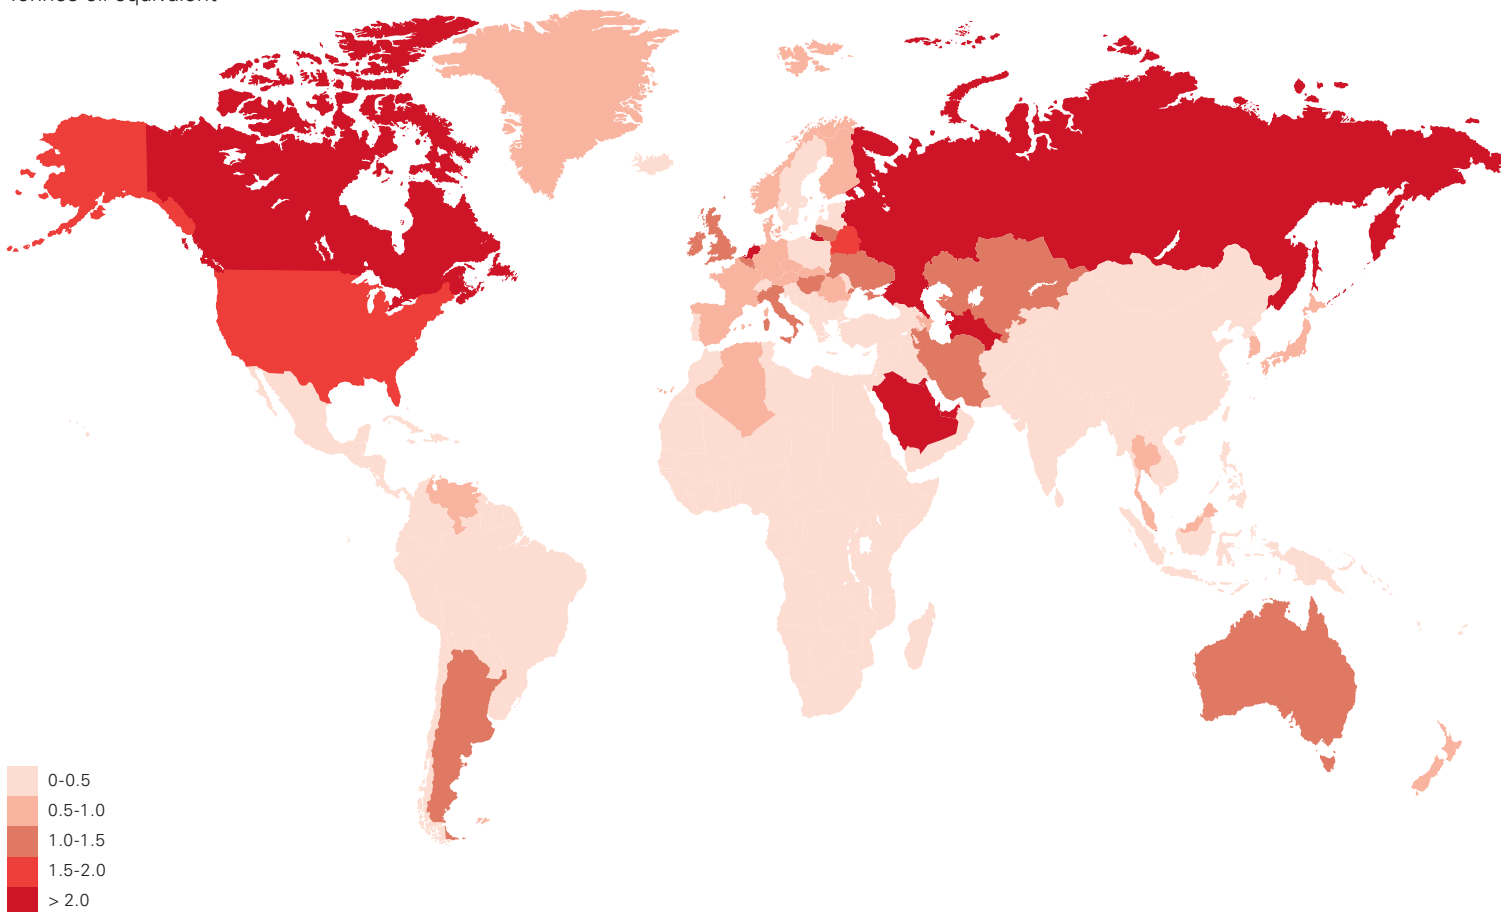

Billion cubic metres

World natural gas consumption rose by 3.1% in 2007, slightly above the 10-year average. The US accounted for the largest increment to growth, rising by 6.5%. In addition to North America, only Africa and Asia Pacific recorded above-average regional growth. Chinese consumption rose by 19.9%, while EU consumption fell by 1.6%.
