bp pulse opens new EV charging hub near Houston's Hobby Airport

30 October 2025

- Located 1.5 miles from HOU, the site features 40 ultrafast electric vehicle charging bays and is now open to the public
- This launch expands bp pulse's presence in Houston following the opening of their first US EV charging hub at bp's Houston headquarters in 2024, and builds on plans to install charging hubs near airport locations in collaboration with Hertz
- To celebrate, bp pulse will hold a launch event offering drivers the opportunity to charge their EV for $0.01/kWh on 11/12*

bp pulse, bp's global EV charging business, is proud to announce the opening of its latest EV charging hub in Houston. Located near the William P. Hobby Airport, this launch further demonstrates the company's ongoing efforts to provide convenient and reliable EV charging options across the United States.

Featuring 40 ultrafast EV charging bays equipped with 150kW DC fast chargers, the new hub is designed to meet the needs of ride-hail drivers, airport rental car customers and local EV drivers, providing them with fast and convenient charging on the go. The site also offers a covered canopy and free Wi-Fi, ensuring a comfortable and connected experience for customers.

To celebrate the new hub, bp pulse will hold a launch event offering drivers the opportunity to charge their EV for $0.01/kWh anytime on November 12th, as well as providing refreshments and giveaways from 9:00am – 4:00pm CT*.

Sujay Sharma, CEO of bp pulse Americas: "We are thrilled to open our latest EV charging hub near Houston's Hobby Airport. This is another example of how we're meeting EV drivers and ride-hailing fleets where they are, across metro and airport locations like this one."

In early 2024, bp pulse opened their first US EV charging hub at bp's Houston headquarters. The Hobby airport hub at 8100 Monroe Road marks an expansion of bp pulse's presence in the Houston area, providing EV drivers with more options for charging. This launch also builds on bp pulse's plans to install EV charging hubs at airport locations across the country, in collaboration with Hertz. This includes the new charging hub at LAX, the largest bp pulse location in the US, and recently opened hubs at SFO and BOS.

Doria Holbrook, EVP Mobility at Hertz: "As our rideshare drivers often turn to EVs, having fast, reliable charging near key locations like Hobby Airport makes a real difference. This new bp pulse hub offers

the convenient access and ultrafast charging our drivers need to stay powered and productive, while also serving the broader EV community in Houston."

Additionally, bp pulse is building its network across a variety of site types in bp's retail network of bp, Amoco, ampm, Thorntons and TravelCenters of America locations. Many of these sites provide drivers with amenities while charging, such as convenience stores, restaurants, and car washes. The company also recently announced a strategic agreement with Waffle House to add charging to their locations from 2026.

*Excludes taxes/applicable fees. Available on 11/12/25, at bp pulse HOU site only (8100 Monroe Rd, Houston, TX).

About bp pulse

With more than 40,000 charge points globally, bp pulse is one of the world's leading EV charging companies. The US is one of four key markets for bp pulse globally, as it looks to grow its EV charging network with a mix of hubs in key urban areas and across sites in its existing retail network of more than 8,000 locations in 46 states. As demand for fuels and EV charging increases in the US, bp is integrating to serve customers more efficiently, no matter what they drive.
