

A year ago, we set ambitious targets to reduce emissions in our operations...

We've made

2.5 million tonnes of sustainable emissions reductions since the beginning of 2016

And we're aiming to deliver 3.5 million tonnes by 2025

2025

We also

met

our targeted methane intensity of

0.2%

Helping us to achieve

Zero net growth in operational emissions

In fact, while our oil and gas production has grown by 3% in a year

**grown**

...our operational GHG emissions have

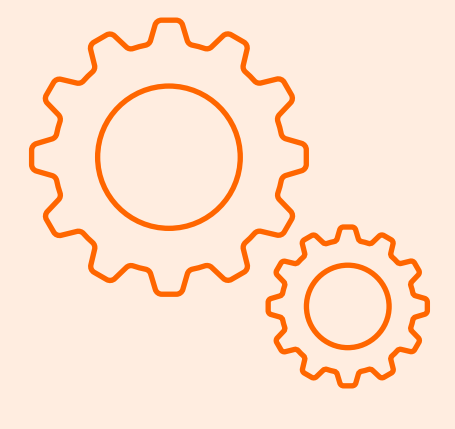

**fallen** ✓

by 1.7 million tonnes in the same timeframe

New ways of monitoring emissions

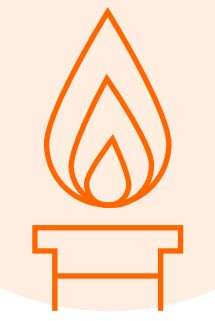

Designing our operations in new ways

Steps we've taken include....

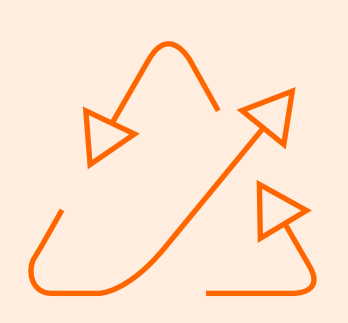

Reducing flaring

Improving energy efficiency

Using waste heat to generate steam

With more to do we have...

Set up an internal fund of \$100 million to implement new ideas

Linked the pay of around 36,000 employees to sustainable emissions reductions
