

# Harnessing the power of Wind

bp and partner EnBW are developing three offshore wind farms in the UK.

Morgan and Mona in the Irish Sea, and Morven in the North Sea. They will have the potential to contribute 5.9GW to the UK's 50GW 2030 offshore wind target.

We are surveying all three project sites to collect data to enable us to build offshore wind farms with high efficiency and low environmental impact.

The three projects will have a combined potential of generating sufficient power to supply the equivalent of around 6 million UK households with clean electricity.

It's bp's biggest offshore integrated site survey ever

7 crewed vessels

6

uncrewed vessels

5,200

line km of geophysical data

207

environmental sampling and camera stations

200+

people working offshore

Powering the UK's green energy transition will help us meet our aim 11 goal of developing

More clean energy
