We intend to invest up to £18 billion in the UK to 2030 – protecting jobs and spurring economic growth.
We are hard at work and in the past 90 days we have:

✓ Submitted the environmental statement for the Murlach field – an oil and gas project designed for below-average operational emissions and to help boost UK energy security.

✓ Signed agreements with UAE companies ADNOC and MASDAR, which could bring significant investment to our proposed hydrogen plants in Teesside.

✓ Contributed £50,000 as construction starts on the Clean Energy Education Hub at Redcar and Cleveland College. Part of a potential multi-million-pound programme for skills development in Teesside.

✓ Planning application submitted to build a 1.25-kilometre gas pipeline at Sullom Voe terminal, Shetland, to bring more gas directly to the UK.

✓ Signed an agreement with the Port of Leith to help it transform into Scotland’s largest offshore wind hub. Creating around 3,000 direct and indirect jobs.

✓ Engaged with 50+ suppliers for H2 Teesside and HyGreen Teesside projects, as well as held 20+ supplier meetings for offshore wind to build new local supply chains.

✓ Launched the UK Social Mobility Report with The Purpose Coalition. bp has provided 440+ apprenticeship opportunities in the UK this year and 100+ work experience placements with partner Career Ready.

✓ Announced plans to invest up to £50 million at our Castrol global HQ to develop a state-of-the-art EV battery testing centre and analytical laboratory. Planned to open in 2024.

✓ Plugged in more EV charging points. From March to June, we switched on 360 bp pulse charging points – part of our £1 billion UK EV charging investment plans over the next 10 years.

✓ Carried out our biggest-ever offshore integrated site survey – for three offshore wind projects in the Irish and North Seas with our partner EnBW. Involving more than 200 people working on five vessels.

✓ Completed a joint feasibility study with BOC, exploring the potential for a UK hydrogen network for heavy-duty transportation.

✓ Contributed £50,000 as construction starts on the Clean Energy Education Hub at Redcar and Cleveland College. Part of a potential multi-million-pound programme for skills development in Teesside.
