

WOSPS

West Of Shetland Pipeline System

Infrastructure Information

The maximum capacity of the WOSP, whilst dependent on both operating conditions in the SVT arrival system and the actual entry point utilised, is nominally 220 mmscf/d. This is potentially expandable up to 560 mmscf/d.

High Level Capacity Information

Basic capacity information is portrayed below through coded ‘traffic lights’, which reflect thresholds of availability over the next 5 years. This chart represents total usage relating to all divided capacity rights:

Available Capacities >25% 5%-25% <5% Unknown

Process Capacity Available	2024	2025	2026	2027	2028	Comments
