Gresik, East Java, 20 August 2026 – bp Indonesia and its Tangguh Ubadari, CCUS, Compression (UCC) Project partners have reached an important project milestone following the successful completion of the offshore pipe coating work by PT Indal Steel Pipe in Gresik, East Java. The work involved anti-corrosion and concrete weight coating for approximately 5,700 pipe joints to be used for the Tangguh UCC Project's offshore facilities.

This achievement represents significant progress for the Tangguh UCC Project and underscores the vital role of Indonesian industry in delivering large-scale energy projects that meet international standards.

The Tangguh UCC Project is designated as a National Strategic Project (PSN) and is being developed to meet Indonesia's growing energy needs. In addition to supporting the energy sector, the project promotes the participation of domestic industry and the local workforce in its delivery.

PT Indal Steel Pipe's involvement, supported by an entirely Indonesian workforce for this scope of work, demonstrates the opportunities for domestic industry to contribute to major energy developments.

Speaking at an appreciation event in Gresik, East Java, on 20 August 2026, Head of Country bp Indonesia James Tehubijuluw said: "The successful delivery of the pipe coating work by PT Indal Steel Pipe marks a key milestone in the Tangguh UCC Project. This achievement demonstrates how collaboration between the energy sector and Indonesian companies can create added value for the country by strengthening domestic industrial capacity."

The event was also attended by SKK Migas Deputy for Business Support Eka Bhayu Setta and Ministry of Energy and Mineral Resources Coordinator for Domestic Potential Empowerment Heru Windiarto.

bp Indonesia and its Tangguh partners expressed their appreciation to PT Indal Steel Pipe for delivering this scope of work on schedule while maintaining strict safety and quality standards.

Together, they remain committed to creating long-term value for Indonesia by supporting the country's energy supply, strengthening its industrial capacity, increasing the use of domestic content and Indonesian talent, and creating economic opportunities that contribute to national development.
