# Entry of Mobile Plant into a Hazardous Area 2 Zone

Document Owner:	Ian Heath	CoW Specialist-Contractor Management	
Approved By:	Scott Purdue	New Zealand Construction Lead	
Prepared By:	lan Heath	CoW Specialist-Contractor Management	
Document Status:	Active	Version 4	
Approved Date:	1-July-2024	Review by: 1-July-2029	

### **Purpose**

This document provides a system of work that allows tasks to be completed safely and without unplanned loss of containment with the potential to cause environmental damage or to damage a plant or equipment.

This document supports Control of Works WI-NZ-4.5.1-01 for the Task Risk Assessment Table (TRAT) and provides instructions for entry of mobile plant into a hazardous area 2, occurring on bp New Zealand retail sites.

## 1. Task/Activity Instruction(s)

Table 1: Instruction for entry of mobile plant into a Hazardous Area 2 zone

Applies to:	All personnel (bp or contractor) who use mobile plant such as Elevating Work Platforms (EWPs) or cranes in a hazardous area 2 on bp New Zealand retail sites.  The mobile plant within the scope of this work instruction shall only be equipment that can be readily de-energised (e.g. by turning off the equipment) in the event a flammable atmosphere is detected or an incident occurs on site that releases product (e.g. a customer or contractor spills fuel).	
To safely use mobile plant (cranes, EWP's etc) within a hazardous area 2 at bp Zealand retail sites.  NOTE: This procedure covers the process and site hazards associated with the mobile plant within a hazardous area, i.e. the potential for flammable atmosph task hazards associated with the use is not within the scope of this work instructions are a specific plant within the scope of this work instructions.		
Risk assessment:	Level 2 Task Risk Assessment-Entry of Mobile Plant within a Hazardous Area 2	
Pre-requisites:	To be used only by bp accredited contractors or sub-contractors engaged through a contractor who is bp accredited to manage sub-contractors.  The contractor shall comply with all relevant requirements of bp procedures and legislation such as licensing, risk assessment, inspection of equipment prior to use, as is applicable to the task. Persons are to complete the Work Clearance Checklist (WCC) associated with the task.  Persons performing the task shall be trained and competent in this procedure with training records kept by their employer and available for audit on request.	

#### 1.1. Step 1 to 8

etc).

2.	Confirm proposed location and any impacted hazardous areas	Refer to bp site service station hazardous zones map. This map shows all specific hazardous area locations. Note those areas that are impacted by the work or are immediately adjacent. If no hazardous areas are impacted, this Work Instruction is not required.  The task may be completed under a WCC and contractor risk assessment (SWMS/JSA) for the task.	
3.	Isolation of fuel sources	All fuel dispensers and pumps within 4m (or 1m beyond the maximum hose length) of the location of the planned use of the mobile plant shall either be locked out (LOTO) & de-energised at the switchboard, or at the dispenser nozzle to the pump and physically barricaded to prevent customer use and access during the work.  LPG exchange cylinder cabinets within 1.5m to be locked shut. bp site are to be informed that they cannot be accessed during the work.  Complete the bp Gas Test Certificate to confirm appropriate areas have been deenergised, and to document this has been completed prior to use of the mobile plant. Physically test each bowser to confirm the de-energisation is effective.  No breaking containment to occur within the work area during entry or use of the mobile plant. As a minimum this area to be the hazardous areas impacted by the mobile plant. Breaking containment is the opening of fuel lines by removal of fittings, draining fuel lines, or other fuel system work that has the potentially to release fuel or vapour to the atmosphere rather than the normal operation of "keeping it in the pipe".	
4.	Prepare gas detector for use	Confirm that the gas detector has a current calibration. Conduct bump testing of the gas detector (also known as challenging) to confirm accuracy prior to use.	
5.	Gas testing of work area	Complete the bp Gas Test Certificate to confirm appropriate areas have been covered and to document completion prior to the entry of mobile plant into a hazardous area 2, including prior to recommencing work after breaks and after tanker deliveries.	

		Gas testing is to be completed by a person trained in NZQA 25510-Operate an				
		atmospheric testing device to determine a suitable atmosphere exists to work				
		All readings shall be 0% LEL and stable prior to commencement of work. Your bp				
		representative shall be contacted if this is not achieved as further investigation may				
		be required prior to confirming the site is safe for work.				
		Use a fire blanket or wet hessian to cover any of the following that affect the work area				
		and keep wet.				
		All dip and fill points (including both remote fill boxes and dip/fill points) within				
	Cover drains, dip &	4m.				
6.	fill points,	☐ Drains/pits within 0.5m.				
	iii poiits,	Separator unit/pit within 0.5m.				
		Complete the bp Gas Test Certificate to confirm appropriate areas have been covered and to document this has been completed prior to use of the mobile plant.				
		This bp work instruction is only for the safe entry of mobile plant into a hazardous area				
	Use of mobile plant	2 on a bp retail site with respect to site and process hazards, e.g. the potential for				
		flammable atmospheres.				
		All bp and legislative requirements for the use of mobile plant shall be complied with				
		for the task including licensing of users of equipment, lift plans, pre-start checks, etc.				
7.		as applicable to the equipment and the task.				
/.		A contractor risk assessment (SWMS or JSA), as a minimum is required for the task				
		hazards and shall be referenced on the WCC.				
		A bp task risk assessment is required for EWPs used at heights >11m and critical lifts.				
		Emergency plan to include a spotter for all mobile plant work and 2 x 9kg DCP fire				
		extinguishers in the work area (additional to the site extinguishers).				
		Authority from bp is required in the form of a Hot Work Permit if in a hazardous area				
		1 zone.				
8.	End of work	Pack up all equipment. Remove debris and make area safe. Report to the site				
		representative and sign off the work as complete on the WCC				
		If the following day the work is to continue, the complete work instruction shall again				
		be followed commencing at step 1.				

## 2. Version Summary
