GPS App Install & Connect

Purpose

To get you up and running to accurate locate your location via combination of GPS and mobile device. BP recommends using GPS devices when completing Repair & Inspection Reports to depict the work location as accurately as possible.

Steps for First Time Setup

Note: The following describes the typical steps to connecting a Trimble R2 to an iPad/iPhone and establishing the Location Provider configuration. This is a one-time setup and should NOT have to be performed every day.

If you have a different GPS device that allows Bluetooth connectivity please contact Mr. Judycki for instructions (jeff.judycki@bp.com)

1. On your device download and Install the GNSS Status through Google Play or Itunes. App is *Free.*
   a. User needs to have and use their own Google Play or iTunes account for downloading.
      i. If you do not have an account for downloading Apps, you will need to create an account either in Google Play or iTunes.
2. **iOS Device:**
   a. Select *App Store*
   b. Search for *GNSS Status*
   c. Download and Install
3. **Android Device:**
   a. Select *Google Play Store*
   b. Search for *GNSS Status*
   c. Download and Install

Connect Trimble R2 to mobile device

For older Android Devices that won't connect with instructions below, please visit this video to help device connect to GPS. https://www.seilergeo.com/2015/07/29/overview-of-trimble-gnss-status-app-on-an-android-device-connected-to-a-trimble-r1-gnss-receiver/

1. Power on the Trimble R2, press the power button until the green light is illuminated
2. Power on the mobile device that will be connected to GPS unit
