

# Castrol

Castrol, bp's world-class lubricants brand, markets its products in more than 150 countries, serving customers and consumers in a variety of sectors, including automotive, marine and industrial.

Castrol is driving innovation across mobility, industry and beyond, from enhancing products to boost fuel efficiency in internal combustion engines and enabling thermal management for electric and hybrid vehicles, to supporting technologies like wind turbines, production line robots and immersion cooling for data centers.

It's also a pioneer in lowering the carbon footprint of lubricants\* with its first-to-market MoreCircular program targeted at business-to-business customers in North America.

## Investing in innovation

Castrol's US headquarters is located in Wayne, New Jersey. In September 2023, Castrol opened the Castrol Americas Technology Center in Wayne, a 12,000-square-foot, state-of-the-art laboratory used to develop and test engine and driveline oils, industrial lubricants and fluids for EVs. The upgraded lab space – a \$7.5 million investment by bp – means that Castrol has under one roof its automotive and industrial lubricant technology teams supporting the US, Canada and Latin America.

## Creating and delivering world-class products

Castrol products are manufactured at facilities in Port Allen, Louisiana, and Warminster, Pennsylvania, and delivered to customers through a network of more than 50 regional distributors.

## Lower-carbon footprint lubricants

Castrol MoreCircular for Business, launched in May 2024, is a program designed to reduce the carbon footprint of lubricants. Used oil is collected from business-to-business customers like fleet maintenance shops, automotive workshops or industrial manufacturing sites by our partner Safety-Kleen, then re-refined and integrated into premium lubricants for supply to businesses.

## On the court and on the track

In October 2024, Castrol was named the Official Motor Oil Partner of both the NBA and WNBA. The multiyear agreement makes Castrol the official entitlement partner of NBA Rising Stars, which takes place annually at NBA All-Star Weekend.

\*These lubricants achieve a lower carbon footprint by using re-refined base oils in place of some or all of the virgin base oils traditionally present in Castrol lubricants, resulting in lower cradle to gate production emissions.
