

California

bp's presence in California ranges from traditional convenience and mobility outlets to a variety of low carbon products, including solar, electric vehicle (EV) charging and biofuels.

Convenience & mobility

bp supports hundreds of California communities with more than 700 *ampm* convenience stores, along with 14 TravelCenters of America (TA) locations statewide.

A leader in RNG

Independently and through its joint ventures, bp owns operating facilities in California and several other states that capture methane from waste and farm manure to produce renewable natural gas (RNG) and electricity. Since acquiring Houston-based Archaea Energy in late 2022, bp is the largest RNG producer in the US.

bp has provided RNG for transportation fuels to Clean Energy's California sites since 2012 and nationwide since 2019.

Solar in the Golden State

The US headquarters for Lightsource bp, a bp-owned business that develops and operates solar assets, is located in San Francisco.

Through a joint venture, we hold a stake in a 16.5 megawatt California solar farm, that generates enough electricity to power 2,600 homes each year.

Expanding our bp pulse EV charging network

With offices in Mountain View, bp pulse, our EV charging business, operates five public EV charging sites and serves a wide range of fleet customers in the transit, last-mile delivery and goods movement spaces.

bp pulse is working with the San Diego Metropolitan Transit System to manage its growing electric bus fleet, and helping Sysco power a growing fleet of heavy duty electric trucks. It has also announced plans to open an ultra-fast bp pulse *Gigahub* at Los Angeles International Airport (LAX).

In July 2024, bp pulse and TA broke ground on one of the nation's first publicly accessible medium- and heavy-duty truck charging stations in Ontario, California.

bp's San Diego Biosciences Center

Our Biosciences Center (BSC) is bp's hub for bioscience research and innovation. The focus of the BSC is on the development of integrated technology solutions to advance bp's bioenergy strategy, and on providing scientific and engineering support to bp's refineries and bp Bunge Bioenergia.
