

Louisiana

Louisiana hosts bpx energy’s onshore oil and gas business in the Haynesville Basin. It also serves as a major hub for coordinating and transporting personnel and supplies to bp’s offshore production platforms and contracted drilling rigs in the Gulf of America.

From Port Fourchon, supply boats carry equipment and material for bp’s five operated offshore platforms and drilling rigs. Just a few miles northwest, in the city of Houma, bp uses PHI’s heliport to move employees and contractors to and from their jobs every day by helicopter.

Gateway to the Gulf

With more than three decades of experience in the Gulf of America, we’re looking to our next wave of growth, with major projects already underway. We’re building capacity to produce above 400,000 barrels of oil equivalent per day (boe/d).

In July 2024, we took a final investment decision on the Kaskida project, which will be our sixth operated hub in the region, featuring a new floating production platform with the capacity to produce 80,000 barrels of crude oil per day. Production is expected to start in 2029.

Onshore natural gas production

bpx energy holds more than a half million acres and one of the deepest inventory bases in the Haynesville, ideally located near export terminals that help meet liquefied natural gas demand from countries trying to diversify their energy supplies.

Our Haynesville operations were bp’s first to receive a basin-wide MiQ grading, independently certifying our natural gas production there as having low methane intensity. Following that milestone, bp became the first energy major in America to verify the methane intensity of its entire US onshore portfolio of natural gas.

Supporting safe operations

Across Louisiana, bp employs more than 830 people and supports more than 10,000 jobs. Offshore teams also receive 24/7 support – including constant communication and real-time data analysis – from bp’s Houston-based Remote Collaboration Center, a global monitoring center for offshore drilling rigs.

bp uses PHI Group, Inc’s heliport in Houma to move employees and contractors to and from their jobs every day by helicopter. bp’s nearby Houma Operations Learning Center also helps train offshore employees and contractors for work in the Gulf of America.

Manufacturing critical products

In Port Allen, bp’s major lubricants facility serves as a regional manufacturing and distribution center for bp Lubricants USA.

Fast facts

- bp’s logistics base in Port Fourchon runs 24 hours a day, providing the food, supplies and tools needed to keep bp’s offshore facilities in the Gulf of America running safely and efficiently.
- bp’s net production was more than 340,000 barrels of oil equivalent per day in the Gulf of America in 2024.
- bp America and the bp foundation donated \$500,000 and 200,000 gallons of fuel to support disaster relief efforts in Louisiana after Hurricane Ida.
