

Washington

Located in Blaine, Washington, bp's Cherry Point refinery is the largest such facility in the Pacific Northwest.

Cherry Point can process about 250,000 barrels of crude oil per day and is the largest supplier of jet fuel to the Seattle and Portland international airports. It was also the first Northwest refinery able to co-process renewable diesel made from biomass-based feedstocks.

bp recently completed three projects at Cherry Point that will help lower its carbon footprint. The Hydrocracker Improvement Project and the Cooling Water Infrastructure Project are reducing the refinery's operational carbon dioxide emissions. The refinery's Renewable Diesel Optimization project doubled its capability to produce renewable energy and is helping to cut the carbon intensity of the fuels it produces.

bp owns more than 3,200 acres of rural land at Cherry Point that is managed for a variety of uses, including ecological restoration, habitat preservation and enhancements.

Investing in the future

Since 2008, Cherry Point has done more than 456 acres of wetland mitigation for four mitigation sites. Advance mitigation is compensatory mitigation, which is constructed before and in anticipation of future impacts to wetlands. Advance mitigation takes a minimum of 10 years to fully mature. Cherry Point also owns one of the state's largest wetlands mitigation sites, which has improved the site's biodiversity.

We also operate Olympic Pipe Line Company, a common carrier pipeline system that transports petroleum products from four refineries to markets in the Puget Sound region, southwest Washington, and Portland, Oregon.

Additionally, bp provided resources for the development of the bp Heron Center at Birch Bay State Park, supporting environmental education programming for more than 2,500 students, community members and park visitors each year.

Inspiring tomorrow's innovators

Cherry Point has been a cornerstone of the local community since it first opened in 1971. The refinery invests in the next generation of energy and technology workers by supporting local schools and education initiatives. bp made community investments to local school district foundations in support of student programming, as well as to the local technical college and regional university in support of student scholarships.
